

Rahul Rawat

Working Student, Data Analytics

PERSONAL DETAILS

Address	C2 16, 68159 Mannheim, Germany
Phone	015563603340
Email	rahulrawat2r@gmail.com
LinkedIn	linkedin.com/in/rahulrawat2r
GitHub	github.com/rahulrawat20022002
Portfolio	rah-portfolio.pages.dev
Date of birth	20 February 2002
Nationality	Indian, student visa with valid work permit
Availability	Werkstudent 20 hours per week immediately, full time from April 2027

PROFILE

Data Science and Analytics Master student at SRH Heidelberg based in Mannheim, with hands on SQL, Python, dashboarding, and end to end data analytics delivery on real operational data. I have shipped a fully automated BigQuery medallion pipeline feeding a five page Looker Studio dashboard for concrete business questions, an interactive two tier Tableau dashboard with dynamic Set Actions and parameter driven analytics on a colour blind safe palette, and a real time cloud pipeline processing more than **128 thousand** records on Google Cloud with dbt and Apache Airflow. Proficient in SQL and Python with practical BI experience, I am the right fit for a dynamic, multicultural Data Analytics working student role at TK Elevator in Duesseldorf.

PROFESSIONAL EXPERIENCE

Oct 2025 to Mar
2026
Heidelberg

eRay GmbH

Data Scientist

- Built an end to end recursive time series pipeline forecasting chlorophyll a, turbidity, pH, and dissolved oxygen for a German lake, delivered as a six month collaboration with SRH University Heidelberg.
- Benchmarked six models head to head, Ridge, Gradient Boosting, LightGBM, XGBoost, CatBoost, and Prophet, and used CatBoost multi quantile regression to produce asymmetric **80 percent** prediction intervals for decision support under uncertainty.
- Enforced strict anti leakage rules across the pipeline, surfacing the honest finding that pH and dissolved oxygen are physically predictable while chlorophyll a and turbidity are not without live optical sensors.
- Reconstructed missing winter readings with MICE imputation and engineered a synthetic winter decay forecast canvas so tree based models stopped flatlining during recursive prediction.
- Wrapped the whole pipeline in an orchestrator with gate checks and velocity and ecological bounds that halts on failed imputation rather than letting bad data cascade downstream.

Technologies: *Python, CatBoost, Prophet, scikit learn, MICE*

PERSONAL PROJECTS

2025

Movie Analytics and ML Pipeline on GCP

- Built an end to end batch pipeline pulling movie data from a public API into a GCS data lake and processing it through Bronze to Silver to Gold medallion architecture in BigQuery, measured by a fully automated Cloud Scheduler trigger with no manual intervention required, using Cloud Run for compute.
- Engineered the Silver layer for trustworthy analytics with schema enforcement, safe type casting, deduplication via window functions, and genre normalisation into a relational model, measured by clean referential integrity across all downstream Gold tables.
- Trained a BigQuery ML classifier that predicts whether a film will be a hit before release, measured by leakage free evaluation, by deliberately splitting features into two tables so only pre release signals feed the model.
- Built Gold layer aggregates and a five page Looker Studio dashboard answering concrete business questions on genre ROI, foreign language growth, and release season timing, measured against the ML early warning view, and secured the system with a least privilege service account and Secret Manager.

Technologies: *GCP BigQuery, Cloud Run, GCS, Cloud Scheduler, BigQuery ML, Python, SQL, Looker Studio*

2025

Fast Food Nutritional Analyzer and Meal Simulator

- Built a dynamic shopping cart inside Tableau, measured by the fact that end users can select scatter plot points and instantly total calories, fat, and protein for a simulated meal, using Tableau Set Actions as the interaction layer.
- Implemented parameter driven analytics with a dynamic Y axis tied to a user controlled goal parameter for muscle gain versus weight loss, measured by consistent axis switching without dashboard reloads, using a CASE statement over the parameter.
- Authored complex order of operation IF and THEN calculated fields for logical grouping and custom flags such as an Is It A Trap flag for deceptive high fat and high calorie items, measured by manual spot checks against the source nutrition data.
- Designed a two tier layout combining an executive macro view and a granular food finder using a colour blind safe dark mode palette, measured against a target of reduced time to insight for a non technical stakeholder.

Technologies: *Tableau with Set Actions, parameters and calculated fields, data storytelling and UI or UX*

Live: public.tableau.com/shared/YC6Y4ZBM5

2025

Real Time Flight Tracking Data Pipeline

- Collected live flight positions from the OpenSky Network API every **30 seconds** and enriched them against airport, aircraft, and weather data across four sources, measured by a clean joined table covering more than **128 thousand** records, using Python collectors and PySpark cleaning on Google Cloud.
- Shaped raw collector output into analysis ready tables with dbt and computed each aircraft's nearest airport along the way, measured by consistent nearest airport labels across the historical dataset, using PySpark for heavy lift and dbt for the modelling layer.
- Orchestrated the whole system with Apache Airflow so batch and real time layers refresh automatically every **15 minutes**, measured by unattended DAG runs on GCS backed storage and Dataproc compute.
- Surfaced findings in a Tableau workbook backed by Python statistics through TabPy, measured by the finding that air traffic drops **4.4 times** in heavy rain and clusters around hubs like Frankfurt and Munich, using dbt aggregates as the visual layer feed.

Technologies: *Python, PySpark, BigQuery, dbt, Apache Airflow, GCP Dataproc and GCS, Tableau with TabPy*

EDUCATION

Apr 2025 to Present Heidelberg	M.Sc. Data Science and Analytics SRH University of Applied Sciences Heidelberg, GPA 1.9
2019 to 2023 Greater Noida, India	Bachelor of Technology in Computer Science GL Bajaj Institute of Technology and Management, CGPA 7.3 of 10

RESEARCH AND THESIS

2022 to 2023 Greater Noida, India	Bachelor Thesis, Diabetes Prediction Using Machine Learning GL Bajaj Institute of Technology and Management, IEEE style paper - Built a full end to end machine learning pipeline comparing six classifiers on a clinical dataset of 768 patients, using 10 fold cross validation and per model confusion matrices to make the model comparison auditable. - Caught biologically impossible zero values that the original authors had overlooked, then applied IQR based outlier removal and proper imputation to restore data integrity before any model fit. - Chose ROC AUC over accuracy as the headline metric for a 65 to 35 imbalanced dataset, avoiding a misleadingly rosy accuracy figure that would have hidden real error patterns in the minority class. - Wrote up findings as an IEEE style paper including an honest section on limitations and what to do differently in a follow up study, publishable in substance. Technologies: <i>Python, scikit learn, Pandas, Seaborn</i>
--------------------------------------	---

CERTIFICATIONS

- SAS Certified Specialist: Visual Business Analytics Using SAS Viya, issued May 2025.
- Google Data Analytics: Foundations, Data, Data, Everywhere, issued April 2025 on Coursera.
- AWS Academy Graduate: AWS Academy Cloud Foundations, issued July 2025.

ACHIEVEMENTS

- USAII Global AI Hackathon 2026: Finalist at Graduate Level, awarded by the United States Artificial Intelligence Institute for innovation, technical creativity, and applied AI on real world challenges.
