Ärzteverband Deutscher Allergologen e.V.

Data Science Team

Wiesbaden

### **Application for Werkstudent, Data Science**

Dear Hiring Team,

The tasks in your posting, data preparation and cleaning, statistical and correlation analysis, and building dashboards, describe almost exactly the projects I have already delivered. In an economic impact study I cleaned and prepared raw global event data, handling outliers, imputation and normalisation, then ran Random Forest and correlation analysis to connect event duration to financial impact and communicated the results visually to a non technical audience. That full path from messy data to a clear statistical finding is the work I enjoy most.

I am equally comfortable on the engineering and visualisation side. I built a real time data pipeline that collects flight positions every 30 seconds and cleans them with PySpark on Google Cloud, joining four separate data sources into analysis ready tables and surfacing the results in Tableau. I have also designed interactive dashboards from scratch, including a Tableau tool with parameter driven views and a colour blind safe layout built to reduce time to insight. I work with Python, PySpark, SQL and cloud tooling, which lines up with the technologies you list.

I am drawn to this position because it offers real data projects where I can apply and extend what I have learned in my Master in Data Science rather than working on exercise datasets. I am available as a working student alongside my studies and based in Mannheim, within easy reach of Wiesbaden, and I work fluently in English. My German is at B1 and improving.

I would welcome the chance to discuss how I can support your data team. Thank you for considering my application.

Yours sincerely,

Rahul Rawat
