Hiring Team

Application: Master Thesis Ambient Sensing for Digital Health Biomarkers

Dear Hiring Team,

I am applying for the Master Thesis position on Ambient Sensing for Digital Health Biomarkers at Bosch in Renningen. My CreditIQ project sits closest to the shape of a health facing machine learning thesis. I built a fairness by design credit scoring system that lifted the Disparate Impact ratio from a failing 0.79 to a compliant 0.88, cut the false negative rate from 44 percent to 16.7 percent while holding accuracy at 75 percent, and shipped a Streamlit decision support tool with a plain language LLM generated explanation and a human in the loop per GDPR Article 22 and EU AI Act Article 14, all backed by unit tests at 100 percent branch coverage and a full regulatory write up.

My Real Time Flight Tracking Data Pipeline shows I am comfortable with continuous streaming sensor data, real time enrichment against external sources, and orchestrated refreshes, patterns that transfer well to ambient sensing signals. My Hybrid RAG Orchestrator shows I can layer language model reasoning on top of retrieved knowledge, which is useful when a thesis needs to combine signal features with clinical or literature context.

My Bachelor Thesis on diabetes prediction, described in the Research and Thesis section, further shows I can run a leakage aware six classifier comparison on a clinical dataset with an honest ROC AUC first evaluation. I am glad to work on site in Renningen and my German is at B1 and improving. I would welcome the chance to discuss the thesis.

Kind regards,

Rahul Rawat
