Mercedes-Benz Tech Innovation
Werkstudent, Data Engineering and Data Science
Stuttgart

Dear Mercedes-Benz Tech Innovation Team,

I am applying for the Werkstudent position in Data Engineering and Data Science. As a Data Science Master's student at SRH Heidelberg, I have built a real time pipeline that polls live sensor style data every 30 seconds and enriches it against multiple sources, plus a credit scoring system that benchmarks gradient boosted models and explains their behavior with SHAP, the same combination of pipeline engineering and model evaluation this role calls for.

Your posting asks for support designing and optimizing data pipelines for vehicle and sensor data, along with developing and evaluating machine learning and deep learning models for use cases such as predictive maintenance and anomaly detection. In my Real Time Flight Tracking project, I cleaned raw data with PySpark, shaped it into analysis ready tables with dbt, and orchestrated the batch and real time layers with Apache Airflow so they refresh automatically.

On the modeling side, my CreditIQ project benchmarked several models, diagnosed a hidden bias using SHAP, and documented the trade offs in a full regulatory style write up, the same rigor I would bring to evaluating models for predictive maintenance or anomaly detection. I am comfortable with Python, including Pandas and Scikit Learn, and have a growing foundation in cloud platforms.

I follow developments in applied AI closely and would welcome the chance to bring that curiosity, to your team in Stuttgart. I am available as a Werkstudent and would be glad to discuss more.

Kind regards,
Rahul Rawat
