REPLY

Hiring Team

Application: Werkstudent Generative AI Google Cloud

Dear Hiring Team,

I am applying for the Werkstudent Generative AI on Google Cloud position at REPLY in Berlin. My Hybrid RAG Orchestrator sits closest to a Generative AI consulting workload. I designed a modular retrieval augmented generation system on Llama 3.1 8b through Groq with LangChain orchestration, a custom router that classifies user intent into three execution paths, ChromaDB with local persistence for semantic search, and a stateful memory agent that maintains conversational context across turns, all shipped behind a Streamlit interface with end to end ownership.

My Movie Analytics and ML Pipeline project shows I can back generative AI with disciplined Google Cloud data engineering. I built an end to end batch pipeline pulling data from a public API into a GCS data lake, processed through a Bronze, Silver, Gold medallion architecture in BigQuery on a Cloud Scheduler trigger, trained a BigQuery ML classifier with careful anti leakage feature splits, and shipped a five page Looker Studio dashboard, secured with a least privilege service account and Secret Manager. My CreditIQ project shows I take fairness, evaluation, and regulatory rigor as seriously as raw model performance.

I can work up to 20 hours per week under my student visa, my German is at B1 and improving, and I am glad to work on site in Berlin or a hybrid setup. I would welcome the chance to discuss the role.

Kind regards,

Rahul Rawat
