Vanderlande
Werkstudent, Artificial Intelligence and Vision
Konstanz, with mobile work possible

Dear Vanderlande Research and Development Team,

I am writing to apply for the Werkstudent position in Artificial Intelligence and Vision. As a Data Science Master's student at SRH Heidelberg, I have hands on experience preparing and enriching large, messy, multi source data, and I would welcome the chance to bring that careful, structured approach to your team.

Your posting asks for support with test and training data, ETL processes, and routine data preparation carried out with high accuracy. In my real time flight tracking project, I built a pipeline that joins live position data against airport, aircraft, and weather records from four separate sources, then orchestrated the whole system with Apache Airflow so it refreshes automatically and reliably every 15 minutes.

I have also engineered a data cleaning pipeline that handles missing values and decodes messy tracking URLs into clean, usable records, and enforced schema and data quality rules in a cloud data warehouse as part of a separate analytics pipeline, the same disciplined attention to data quality this role calls for.

I am comfortable with Git, have a technical foundation in Python and Linux, and am available part time for 20 hours a week. I would be glad to discuss how I could support your Artificial Intelligence and Vision team.

Kind regards,
Rahul Rawat
