Valantic

Eschborn, with a remote or Mannheim option

Dear Valantic SAP AI Team,

I am applying for the Praktikant or Werkstudent position on your SAP AI Team. As a Data Science Master's student at SRH Heidelberg, I have already designed and shipped a modular retrieval augmented generation system from end to end, using Llama 3.1 8b through Groq for fast inference, LangChain for orchestration, and a custom router that decides between local retrieval, live web search, and direct conversation. That kind of hands on agentic AI build is exactly the real prototype work your posting describes.

Your posting asks for comfort with modern AI APIs such as OpenAI function calling, retrieval augmented generation, embeddings, vector databases, agents, and tools. In my RAG Orchestrator project I implemented ChromaDB for persistent vector storage, used HuggingFace embeddings for semantic search, and built a stateful memory agent that holds conversation context across turns, all wrapped behind a deployed Streamlit interface I owned from design through delivery.

Beyond generative AI, I have also automated a full cloud data pipeline on Google Cloud Platform, from ingestion through a medallion architecture in BigQuery to a Cloud Scheduler trigger that runs with no manual steps, and orchestrated a real time pipeline with Apache Airflow. That cloud automation background should translate well to SAP Cloud Native once I learn it in practice.

I am available up to 20 hours a week as a Werkstudent under my student visa and based in Mannheim, which is one of the locations you list for this role. I would welcome the chance to bring my AI engineering experience to your team and am happy to discuss timing at your convenience.

Kind regards,
Rahul Rawat
